

Airport Handling

AIRPORT HANDLING ENVIRONMENTAL POLICY

It is a precise commitment of Airport Handling to combine the value of respecting and safeguarding environmental heritage with competitiveness and business development.

The adoption of an Environmental Management System represents a further confirmation of the company's effort and attention to the market in which it operates, by preserving the Environment for both Airlines and Passengers who choose them for their travels.

Airport Handling's environmental policy is based on the following principles:

- Pursue full compliance with all environmental legislation at the international, national and local level, providing optimum performance with a view to continuous improvement of environmental performance.
- Collaborate with customers and suppliers so that environmental management becomes a factor of competitiveness within the national and international market.
- Valorize and involve human resources in order to increase their expertise and sensitivity on environmental issues.
- Maintain a level of listening and communication of all internal and external interlocutors in a transparency and sharing perspective.
- Continuous monitoring of the environmental aspects that characterize the activities, setting goals and goals re-evaluated annually.

The Environmental Management System is periodically subject to external audits and it is based on a progressive improvement in the governance of environmental phenomena associated with Airport Handling activities.
