

ENVIRONMENTAL AND ENERGY POLICY

Airport Handling

Airport Handling's corporate priority is the management of the environment and energy performance in accordance with a consistent system, aimed at continuous performance improvement.

To safeguard environmental and energy resources, Airport Handling uses technologically advanced equipment in order to use resources efficiently and reduce emissions in the atmosphere. The GSE monitoring system constantly checks the activities of each GSEs and ensure that maintenance checks are made within the due times.

As part of an eco-compatible management that respects the environment and energy consumption, Airport Handling is inspired by the following principles:

- Handling activities must be carried out respecting and protecting the quality of the environment and the health of internal and external personnel.
- Developing programmes to address the environmental impact, risks and opportunities.
- Minimizing the environmental impact and improving environmental and energy performance.
- The awareness of everyone (employees, partners, suppliers) regarding environmental, energy and safety issues of their activities is a needful element for improving the performance of the entire company.
- Full compliance with all environmental regulations at international, national and local level, to deliver optimal activities with a view to continuous improvement of environmental performance.
- Collaborate with customers and suppliers so that environmental management becomes a factor of competitiveness within the national and international market.
- Maintain a high level of listening and communication of all internal and external stakeholders in a perspective of transparency and sharing.
- Continuous monitoring and reporting of environmental and energy aspects that characterize the activities and setting of goals and targets annually re-evaluated.

To translate above principles into operations, Airport Handling is committed in pursuing following objectives:

- comply with or exceed all applicable environmental, energy and safety legislation, internal regulations and all requirements agreed with third parties by pursuing appropriate solutions.
- develop and maintain management systems and procedures to improve our performance, integrating environmental and energy requirements within relevant business decisions.
- implement a life-cycle approach to procuring, maintaining and retiring products and equipment, driving towards a more sustainable product and service offering.
- prevent pollution and use resources efficiently by committing in continuous improvement of environmental and energetic performance through:
 - rational and efficient use of resources.
 - foster innovation and invest in ground equipment and facilities with eco-efficient technology as well as clean energy and sustainable fuels to minimize emissions and waste.
 - collaborate with key stakeholders to contribute to solutions to local and global environmental challenges, including exploring pathways to net zero emissions.
 - continuous monitoring of consumptions and adoption of rigorous maintenance criteria.
 - equip our employees with the knowledge and skills to increase their expertise and sensitivity on environmental and energy issues.
 - engage leaders and employees across the business to enhance our environmental and energetic performance.
 - support initiatives focused on responsible tourism, the protection of natural capital and biodiversity, and action against the illegal trade in wildlife.

It is a precise commitment of Airport Handling to combine the value of respecting and safeguarding environmental heritage with competitiveness and business development.

The adoption of an Environmental and Energy Management System represents a further confirmation of the company's effort and attention to the market in which it operates, by preserving the Environment for both Airlines and Passengers who choose them for their travels.

The Environmental Management System is periodically subject to internal (ref. SGA PG03 – Internal audit) and external audits and it is based on a progressive improvement in the governance of environmental phenomena and energy uses associated with Airport Handling activities.

The Environmental Management System is annually subject to review by the Executive Committee.
